

LIVE DEMONSTRATION

Finding & understanding research papers.

Search PubMed and 200 million papers from inside your chat, map the literature in minutes, and read any paper like a reviewer.

PULMOCON 2026 · 8:00 PM

THE PROBLEM

Too many papers, **too little time**

1M+

new PubMed citations a year

No clinician can keep up by reading alone.

35M+

citations in PubMed

Now searchable from inside Claude through the PubMed connector.

220M+

papers in Consensus

Searchable from inside ChatGPT and Claude.

AI doesn't read for you. It gets you to **the right 10 papers faster**, and helps you understand them.

Figures from NLM and vendor pages, 2026; approximate.

THE WORKFLOW

Six steps from question to understanding

01**Ask**

Turn the topic into a PICO question.

›

02**Search**

Connectors: PubMed and Consensus inside Claude or ChatGPT.

›

03**Map**

Semantic Scholar, ResearchRabbit, R Discovery for related work.

›

04**Screen**

Elicit tables; keep the 5–10 that matter.

›

05**Read**

Upload the PDF and question it with prompts.

›

06**Verify**

Open every source. Check the claim. Save to Zotero.

01

FINDING

Search from **inside your chat**

Connectors turn Claude and ChatGPT from 'remembering' papers into searching real databases.

CONNECTOR 1

Claude + PubMed

WHAT IT DOES

Live PubMed inside Claude

- Searches 35M+ biomedical citations with real PMIDs
- Reads abstracts and open-access full text (PMC)
- Finds related articles to a paper you like
- Part of Claude for Healthcare and life sciences connectors

SET UP IN 30 SECONDS

Settings → Connectors → PubMed

- Switch it on in the chat's tools menu
- Say 'search PubMed for...' so it uses the connector
- Ask for PMIDs every time
- Works in Claude on the web, desktop and mobile

Test it: ask for a paper and click the PMID. **If it opens and matches, the connector did its job.**

LIVE DEMO

A literature scan with PMIDs

PROMPT · CLAUDE + PUBMED

Search PubMed for studies from [2020-2026] on [bronchiectasis exacerbations and long-term macrolides].

Return a table: first author, year, design, country, n, intervention, comparator, primary outcome, main result with effect size and 95% CI, PMID.

Then:

1. Group the studies by design.
2. Say what is consistent and what conflicts.
3. List 3 evidence gaps a resident could study in India.

RULES: Include only papers retrieved in this search. Write [NOT REPORTED] for missing values. Flag any retracted paper.

WHY IT WORKS

Date and topic scoped

Keeps it current and focused.

Extraction table

Comparable fields for every study.

Gaps for your thesis

Links reading to research ideas.

Only what it retrieved

No references from memory.

CONNECTOR 2

Consensus inside ChatGPT and Claude

What does the evidence say?

Ask a yes/no question; get a summary across studies with how many support or oppose it (the Consensus Meter).

Filter by study quality

Restrict to RCTs, meta-analyses or systematic reviews, by year, sample size or journal.

Where to switch it on

ChatGPT: Apps → Consensus (listed since 2026). Claude: Settings → Connectors → Consensus.

Use Consensus for 'is there evidence that...' and PubMed for 'find me the papers on...'.
Use Consensus for 'is there evidence that...' and PubMed for 'find me the papers on...'.

POWER FEATURE

Deep Research: an analyst on demand

GREAT FOR

Scoping a new topic

- A structured, cited report in 5–15 minutes
- Background for an introduction or a seminar
- Comparing guidelines across societies
- Available in ChatGPT, Claude, Gemini and Perplexity

HANDLE WITH CARE

Not a systematic review

- Can miss key papers or misread results
- Mixes high- and low-quality sources
- Verify every citation it returns
- Never paste patient data into it

02

THE RESEARCH TOOLKIT

Dedicated tools **worth knowing**

Each does one job better than a general chatbot.

DISCOVER AND MAP

Find the papers, **see the connections**

FREE · 200M+ PAPERS

Semantic Scholar

AI search across the literature with one-line TLDR summaries and citation counts.

FREE APP

R Discovery

A personalised daily feed of new papers in your field, with audio and translated summaries.

FREEMIUM

ResearchRabbit

Add a few seed papers; it builds a citation map and surfaces related and later work.

VISUAL GRAPH

Connected Papers

One seed paper becomes a graph of similar work; spot the landmark papers fast.

Start broad (Semantic Scholar or PubMed), then **expand your best 2–3 papers** with ResearchRabbit or Connected Papers.

SCREEN, READ AND CHECK

From 200 results to **the 10 that matter**

SCREEN AND EXTRACT

Elicit

Screens many papers and pulls PICO, outcomes and results into a table you can export.

CHAT WITH A PDF

SciSpace

Ask plain-language questions of a paper: methods, tables, statistics.

SMART CITATIONS

Scite

Shows whether later papers support or contradict a finding.

WRITE WITH CITATIONS

Jenni AI

Drafting help with inline citations (Vancouver and others) from PubMed and Semantic Scholar.

DECISION GUIDE

Which research tool for which job?

JOB	FIRST CHOICE	ALSO GOOD
Find papers on a specific question	Claude + PubMed connector	PubMed directly · Semantic Scholar
Is there evidence that...?	Consensus (ChatGPT or Claude)	OpenEvidence for clinical questions
Scope a topic I don't know	Deep Research	Perplexity (academic focus)
Map related and newer work	ResearchRabbit	Connected Papers · Litmaps
Stay updated in my specialty	R Discovery	PubMed saved-search email alerts
Screen and extract many papers	Elicit	Rayyan for systematic reviews
Understand one paper deeply	Claude or ChatGPT with the PDF	NotebookLM · SciSpace

03

UNDERSTANDING

Read any paper **like a reviewer**

Upload the PDF, then ask the questions a good journal club would ask.

READ A PAPER IN 5 PROMPTS

The **five questions** for every paper

01**What did they do?**

Plain-language summary in 5 lines: question, design, population, main result.

›

02**PICO and design**

Population, intervention, comparator, outcomes; the study design and why it fits.

›

03**Can I trust it?**

Risk of bias with the right checklist: CASP, RoB 2, Newcastle–Ottawa.

›

04**What do the numbers mean?**

Explain the tables: HR, OR, CI, p-values, NNT, in plain words.

›

05**So what for my patients?**

Applicability to Indian settings, and what would change practice.

PROMPT TO USE TONIGHT

Understand a paper in 10 minutes

PROMPT · UPLOAD THE PDF FIRST

PERSONA: You are a clinical epidemiologist who runs our department journal club.

MATERIAL: [Attached PDF of the paper]. My level: [MD resident, year 2].

TASK:

1. Summarise the paper in 5 plain-language lines.
2. Give the PICO and the study design.
3. Appraise it with the right checklist ([CASP / RoB 2 / Newcastle-Ottawa]); list the 3 biggest threats to validity.
4. Explain Table 2 and the main result: what the effect size and 95% CI mean for a patient.
5. Say whether it applies to [a government hospital in India], and why.

RULES: Use only the attached paper; quote the sentence you rely on. Write [NOT REPORTED] if it isn't there.

WHY IT WORKS

Grounded

'Use only the attached paper' plus quotes.

Right checklist

The design decides the tool.

Numbers explained

Effect size in patient terms.

Applicability

The question examiners ask.

BEYOND ONE PAPER

NotebookLM: read ten papers at once

Grounded answers

Answers only from the papers you upload, with a citation to the exact passage.

Compare across papers

"How do these 6 trials define exacerbation?" in one table.

Audio overview

A podcast-style discussion of your papers for the commute.

Mind maps and guides

A concept map and study guide from your sources. Free with a Google account.

Best for journal club prep and literature reviews: **your sources only, every answer traceable.**

IF YOU REMEMBER ONE THING

Never cite a paper **you haven't opened**

THE FAILURE

Invented references

Real-sounding authors, journals and years that don't exist, or real papers that don't say what's claimed.

THE HABIT

Open, check, save

The PMID or DOI opens; the paper says what's claimed; it isn't retracted; save it to Zotero.

WHY IT MATTERS

Your name is on it

A fabricated citation outlives the deadline that tempted you to skip the check.

TAKE-HOME

Search smarter. Read deeper.

Connectors to find, dedicated tools to map and screen, five questions to understand, and your own eyes to verify.
